

SYSTEM PROJECT

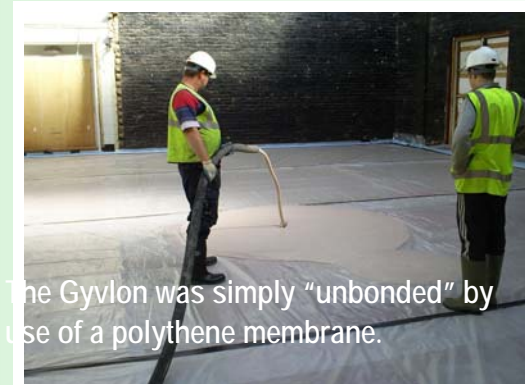

Unbonded Screed over Concrete Slab
Factory conversion to Offices,
Nerston, East Kilbride

Sand/Cement was considered too slow. The project was already behind schedule.
Gyvlon chosen because of its speed of application.

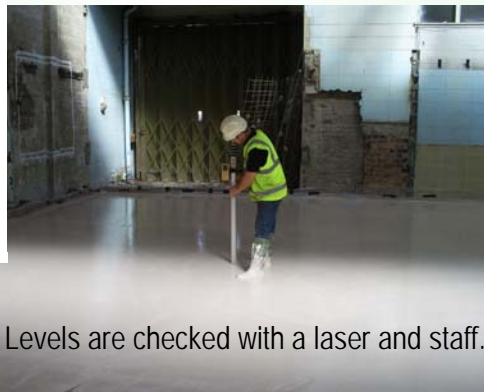

The original concrete slab was very uneven, therefore the thickness of the Gyvlon varied from 40mm to 55mm

Gyvlon was discharged from the truck mixer and pumped directly to the area of placement.

The Gyvlon was simply "unbonded" by use of a polythene membrane.

Levels are checked with a laser and staff.
