

From time to time we are asked about primers, sealers, tile adhesives, levelling compounds etc..

Whilst Gyvlon does not give warranties on products manufactured by other companies, we are aware of a number of manufacturers who have a range of products or systems, which are usable or compatible with Gyvlon screeds.

Primers and sealers will usually be of the Acrylic or Epoxy type. In *all* cases, advice should be sought from the manufacturer.

Levelling compounds and tile adhesives, can be based on Cement or Calcium sulfate. Those products based on cement are usually part of a system which incorporates a sealer/primer designed to separate the cement from the calcium sulfate contained within the Gyvlon screed.

Those levelling compounds based on Calcium sulfate usually do not need a sealer but will still require a primer in order to prevent the moisture being drawn into the screed from the levelling compound/tile adhesive, too quickly. (Often referred to as “suction”).

Again, in *all* cases, advice should be sought from the manufacturer.

Below is a list of manufacturers who have a range of products or systems which have been used successfully with Gyvlon screed. This list is not exhaustive.

Laybond	01785 272727
Bal/Dunlop	0845 6001222
Creative Impressions	01772 335435
Ardex	01440 714939
Tremco	01942 251400
Instarmac	01827 871871
Uzin	01235 534106
